

*Fully Assembled
& Easy to Install!*

Moffett brand kit

Navigator brand kit

Godwin's Truck Mounted Forklift
Carriers are easily installed in 6 hours or less!

- Designed with installer in mind
- No guesswork to install or book of complicated instructions
- Shipped fully assembled with all required mounting parts
- Truck mounted carrier fits over the rear truck chassis
- This is a total bolt on application
- Comes with integrated retractable ICC bumper
- No need for tools to change from 31" to 36" wheel on lift

Other name brands have a complete book of installations, but with the Godwin TMF Carrier, you only have to know the diameter of the wheel for the all-terrain vehicle. (forklift)

By knowing the diameter of the wheel, the center line of the wheel chock to the underneath of the body understructure should be ½ the diameter of the wheel plus 2".

To determine front to back, you will measure from the center of the wheel chock to the rear most of the body to be the diameter of the carrier wheel.

Moffett brand Kit

Wheel adjustment can be adjusted in increments of 1-1/2" according to diameter of the wheel. No tools needed, just remove the pin to adjust to as needed. All pins are tapered to self-align the holes when adjusting to another wheel size.

Navigator brand Kit

Carrier comes with integrated storage tube for storing hanger kit for carrier. Hanger kit requires no shop wrenches and is adjustable front to back of body.

When extending or retracting the wheel chock, you only remove and replace pin to put snap ring in place.

On the ICC Bumper, to retract and extend, simply turn the spring loaded positive latching click pins. No tools required.

Godwin offers a dump variation of the TMF Carrier which can be used with Godwin's dumping and/or dump rollback bodies.
